## CHARGE POUCH

The charge pouch is a high-retention, low-profile storage module designed for breachers and demolition experts:

- Built to carry strip charges, compact tools, and mission-specific breaching equipment
- Features an adjustable shock cord retention system, ensuring a perfect balance of security and quick access.
- Optimized for fast-paced, high-risk operations, keeping essential tools locked in place during aggressive movements.
- Constructed with laser-cut precision
- IRR compliant

## COLOUR OPTIONS

## QUAD CELL (H&L)

The Quad Cell is an adaptive storage solution designed to securely carry IFDs, flashbangs, or other mission-critical items:

- Velcro (Hook and Loop) pouch closure
- Maintains a tight and compact profile allowing for instant deployment when every second counts
- Laser-cut precision
- IRR compliant
- Whether used for distraction devices, signalling tools, or op-specific explosive munitions, the Quad Cell is a must-have for operators in dynamic environments.

# ASSAULT

LODEout

## TRIPLE MAG CARD

The Triple Mag Card is a slick, high-speed magazine storage solution designed to securely hold three 5.56mm magazines with Kydex retention with maximum stability and rapid access:

- Fully compatible with all plate carriers, LODEout receivers, and jump flaps, offering modular adaptability to different mission requirements
- Can be integrated with Mushroom Hooks for customized retention
- Laser-cut precision
- IRR compliant

# MEDICAL

## TFAK

The Tactical First Aid Kit (TFAK) is a low-profile, rapidly deployable medical pouch designed for immediate access in critical situations:

- Attaches to the LODEout™ receiver via magnetic connection and optional Rabbit Teeth Retention (RTR)
- Can be instantly ripped off in an emergency, allowing operators access to life-saving gear without delay
- The magnetic attachment means the module can be fixed to vehicles, structures, or any metal surface
- Integrates seamlessly with every LODEout Back Panel
- Compact and lightweight
- IRR compliant
- Laser-cut precision

## IFAK

The Micro IFAK is an ultra-low-profile trauma kit designed for military combat, close protection, and EDC environments. Engineered for discreet carry without compromising capability, it holds all the essential life-saving equipment needed for rapid trauma response.

Despite its compact form, the Micro IFAK is designed to contain:

- Haemostatic Gauze for severe bleeding control
- Compact Tourniquet for arterial haemorrhage management
- Compression Bandage for wound stabilization
- Vented Chest Seal for penetrating chest injuries
- Micro Trauma Shears for cutting clothing or gear in emergencies

\*\*\* The Micro IFAK is designed to attach to our Micro-Dangler and/or our Micro Receiver that fits to any belt up to 1.75".

# MEDICAL

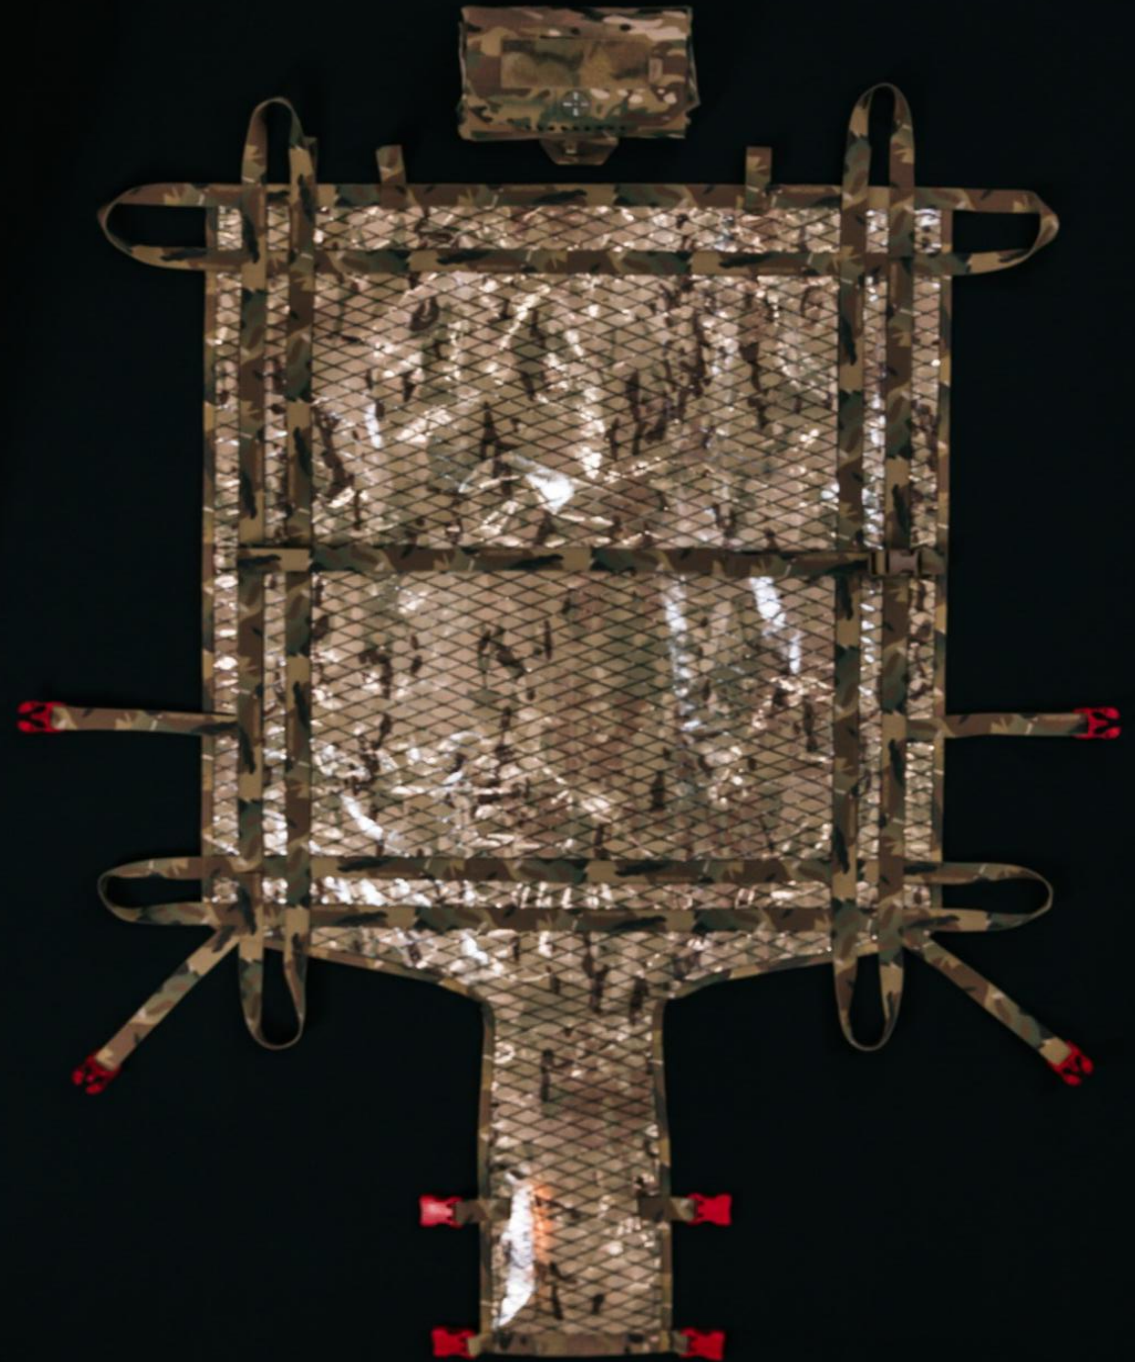

## RD STRETCHER **LODE**out

The Rapid Deployment Stretcher (RD Stretcher) is an ultralight, compact, and rapidly deployable casualty evacuation tool:

- Designed for a four-person carry or a two-person drag
- Allows wounded personnel to be moved quickly and efficiently in life threatening situations
- Constructed from high-strength XPAC material, it is both lightweight and incredibly durable
- The LODEout™ feature enables magnetic attachment to vehicles, structures, or any metal surface
- Mil-spec assembled with laser-cut precision
- IRR compliant

## OPS-PACK

The Ops-Pack is an ultra-low-profile mission pack engineered for operators requiring maximum efficiency with minimal signature:

- Carries up to four Modules
- The compact design facilitates unrestricted movement
- The clamshell opening provides full access to contents for rapid gear retrieval and gear re-organization
- LODEout integrated, it can magnetically attach to metal surfaces, making it a perfect companion for vehicle-mounted operations or urban environments
- IRR compliant with laser-cut precision

## COMPATIBLE WITH

Standard Modules

Window Utilities

# UTILITY

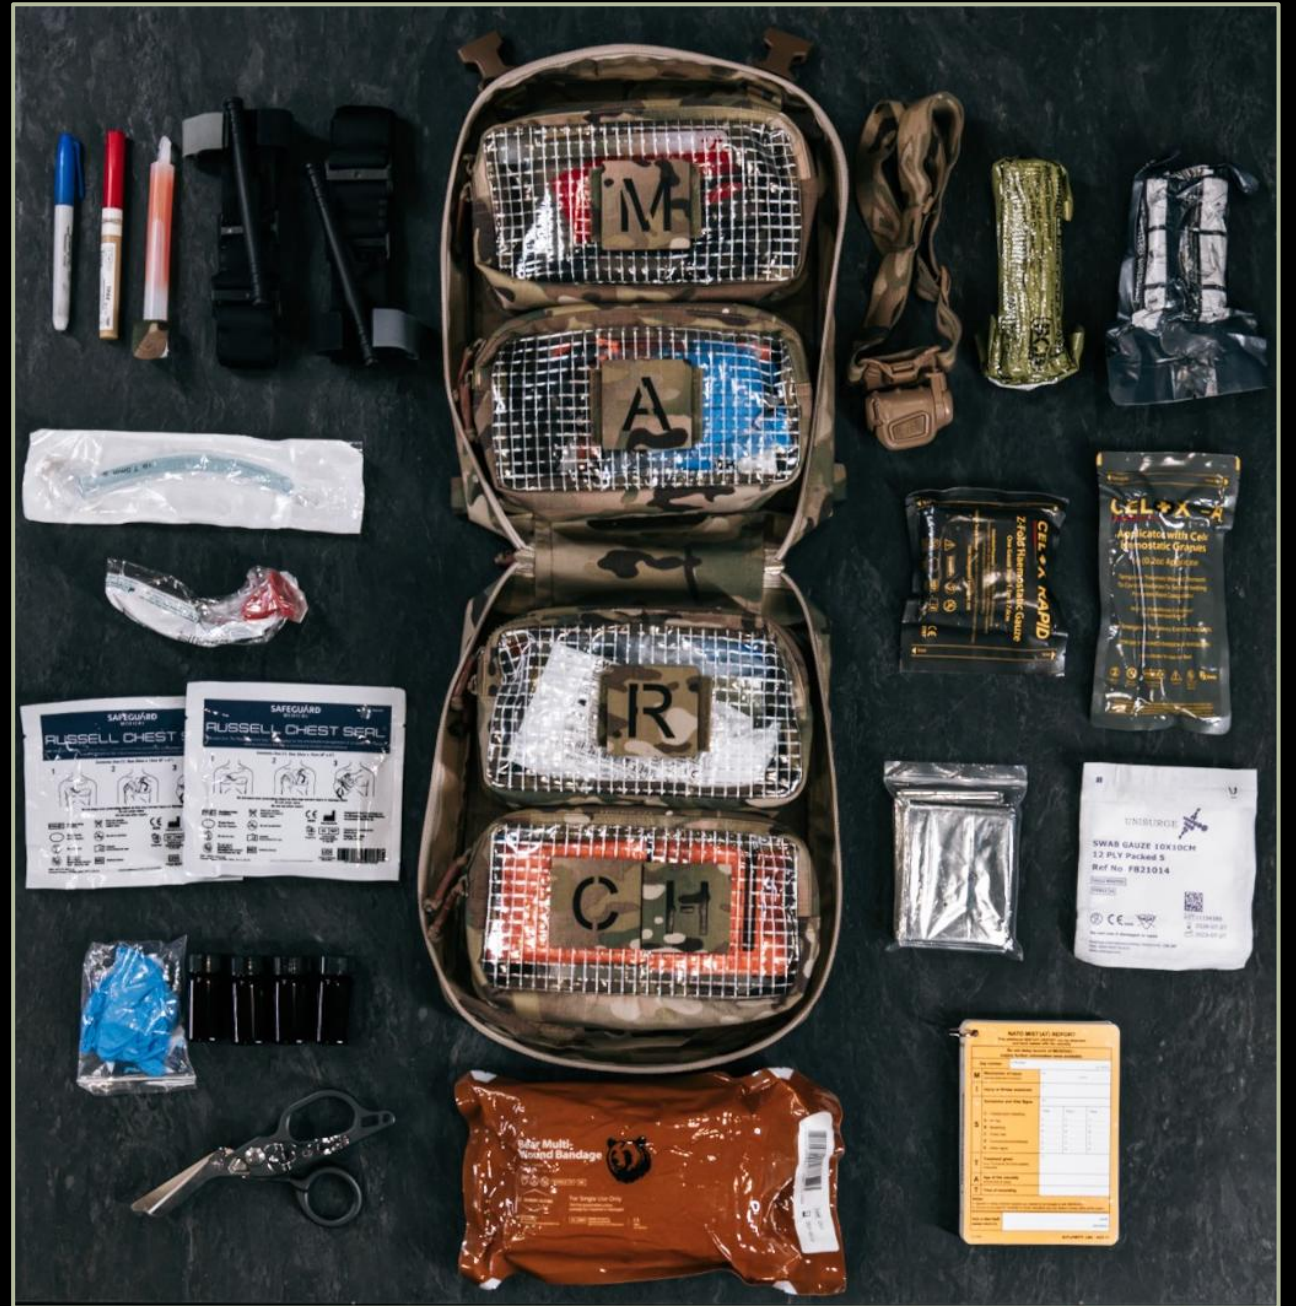

## OPS-PACK (MED)

The Ops-Pack (Med) is precision engineered for operators and medics requiring maximum efficiency, capability, and speed with minimal signature:

- Carries up to four window utility modules
- The compact design facilitates unrestricted movement
- The clamshell opening provides full access to contents for rapid gear retrieval and gear re-organization
- LODEOut integrated, it can magnetically attach to metal surfaces, making it a perfect companion for vehicle-mounted operations or urban environments
- IRR compliant with laser-cut precision

## COLOUR OPTIONS

## UTILITY (ZIP)

The Utility Zip is a modular storage pouch designed for unrivalled adaptability across a variety of mission profiles. It can mount to any LODEOut Back Panel, Cumber-band Receiver, Dangler Receiver, or LODEOut Harness:

- Provides secure & compact storage for mission-essential tools and accessories
- Can also be converted into a fanny-pack using the Zip Utility Harness
- Can be both mounted and dismounted during operations
- Fully IRR compliant with laser-cut precision

## UTILITY (WINDOW)

The Utility Zip (Window) is a modular storage pouch designed to stow mission-essential equipment that remains rapidly identifiable and accessible from within the backpack. This module is ideal for segregating medical equipment, for housing items such as SSE materials or fast-rope gloves. The Utility (Window) can mount to any LODEOut receiver should the situation demand a rapid change of tact:

- Provides secure & compact storage for mission-essential tools and accessories
- Can be both mounted and dismounted during operations
- Fully IRR compliant with laser-cut precision

# UTILITY

## DEPLOYMENT ROLL (MOBILITY)

The Roll is a compact, ultra-efficient gear organizer designed for stowing and organising multiple LODEout Modules on pre-planned/log-term deployment (i.e., FOB settings), or for stowing and organising mission-essential kit on Mobility operations. Featuring multiple elastic loops and segmented compartments, The Roll ensures operational equipment remains organized and instantly accessible both prior and during missions. The roll-up design allows for rapid deployment, while its low-profile construction minimizes bulk when stowed.

## DEPLOYMENT ROLL (MED)

The Med Roll is a compact, ultra-efficient gear organizer designed for streamlined storage and deployment of mission essential kit. Featuring multiple elastic loops and segmented compartments, it ensures MED Modules remain organized and instantly accessible in life threatening situations. The roll-up design allows for rapid deployment, while its low-profile construction minimizes bulk when stowed. Integrated with the LODEout™ system, it can be magnetically attached to metal surfaces, providing quick access in vehicles, medical stations, or command posts:

- IRR compliant with laser-cut precision
- Carries six Med Modules

# RECEIVERS

# RECEIVERS

## MOLLE RECEIVER

The MOLLE Receiver is a transformative adapter that revolutionises traditional MOLLE platforms into a Lodeout™ system of compatible receivers:

- Unlocks seamless integration with Med, Assault, and Utility modules
- Provides instant modularity and adaptable loadouts across multiple mission profiles
- IRR compliant
- Ensures operators maintain peak efficiency without compromising existing and/or preferred platforms.

## DROP-LEG HARNESS

The Drop Leg Harness mounts to the operator's thigh, providing a stable and accessible platform for all Zulu Origins modules:

- Ensures rapid accessibility without compromising movement or agility
- Invaluable for CQC, reconnaissance, and direct actions
- Laser-cut precision and IRR compliant
- Built for speed and tactical efficiency

# RECEIVERS

## DANGLER

The Dangler Receiver is built for the low-profile and streamlined carriage of IFAK's and other mission-essential tools, keeping operationally critical gear within immediate reach. Designed to attach directly beneath a plate carrier, it minimizes bulk while maintaining accessibility:

- Featuring LODEout™ system compatibility, The Dangler can securely house all LODEout™ Modules
- Jump flap compatible
- IRR compliant with laser-cut precision
- Extends the number of modules and mission-essential tools that operators can carry onto target
- Essential for optimised organization and rapid response

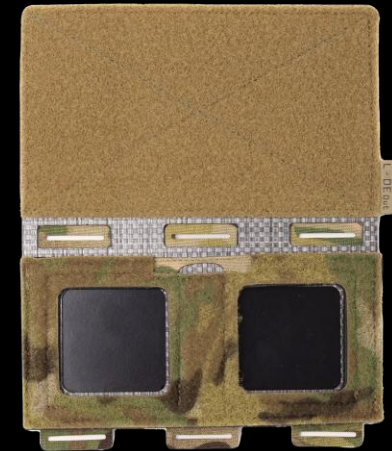

## COLOUR OPTIONS

## MICRO DANGLER

The Micro Dangler offers the same functionality as the standard Dangler but in a more compact and streamlined footprint, making it ideal for minimalist loadouts:

- Designed for operators who require quick-access to life-saving medical equipment (i.e., Micro IFAK) without excess bulk
- Maintains Lodeout™ system compatibility for instant reconfiguration on the fly
- Jump flap compatible & fully IRR compliant
- Maintains a low-profile appearance for a wide range of mission profiles (including covert tasks)

# RECEIVERS

## DOUBLE DANGLER

The Dangler Receiver is built for the low-profile and streamlined carriage of IFAK's and other mission-essential tools, keeping operationally critical gear within immediate reach. Designed to attach directly beneath a plate carrier, it minimizes bulk while maintaining accessibility:

- Featuring LODEOut system compatibility, The Dangler can securely house all LODEOut Modules
- Jump flap compatible
- IRR compliant with laser-cut precision
- Extends the number of modules and mission-essential tools that operators can carry onto target
- Essential for optimised organization and rapid response

## MICRO RECEIVER

The Micro Receiver is specifically designed to retain the IFAK. It offers has a more compact and streamlined footprint, and is uniquely designed to for attachment to shooters belts:

- Designed for operators who require quick-access to life-saving medical equipment (i.e., Micro IFAK) without excess bulk
- Maintains LODEOut system compatibility for instant reconfiguration on the fly
- Fully IRR & Berry compliant
- Maintains a low-profile appearance for a wide range of mission profiles (including covert tasks)

## BACK PANEL **LODE**out

The Back Panel is our core receiver, designed specifically for market leading plate carriers, offering instant LODEout module transitions and rapid reconfiguration:

- Depending on your carrier of choice, we adapt zip lengths and the tegriss 'tabs' to ensure a perfect fit, maintaining seamless integration with the following plate carriers (non-exhaustive):
  1. Spiritus Systems
  2. C2R Fast
  3. Virtus
  4. Crye Precision
  5. Blue Force Gear
  6. Ferro Concepts
  7. Warrior Assault Systems
- The Back Panel Seamlessly holds all LODEout Modules, including our Ops-Pack.
- Full IRR & Berry compliant
- Is an invaluable component for interoperable tactical performance

# ANCILLARIES

## DANGLER RETENTION

The Dangler Retention transforms the comfort and efficiency of our Dangler Receivers. By seamlessly locking into shooters belts and/or carriers, the retention system G-hooks into the Dangler and prevents both noise and unnecessary movement (flapping):

- Enhances comfort, speed, and tactical efficiency, making it a highly adaptable accessory for all mission profiles
- Lightweight, low-profile, and fully integrated with the entire LODEout range
- Laser-cut precision and IRR compliant
- Built for agility and rapid deployment
